MEDIA RELEASE

26 October 2026

Innovaero advances international defence opportunities at AUSA 2026 in Washington, DC.

More than 70 meetings strengthen engagement with potential US and allied, particularly Canadian, defence partners.

Perth-based defence technology company Innovaero Technologies Limited (ASX: INN) has completed a successful program of international industry engagement at the Association of the United States Army (AUSA) Annual Meeting and Exposition, held in Washington D.C. from 12-14 October 2026.

Participating as part of Team Defence Australia, Innovaero conducted more than 70 meetings with defence companies, prospective manufacturing and distribution partners, government representatives and technology collaborators.

Discussions focused on opportunities to introduce Innovaero's Australian-developed OWL family of autonomous precision munitions into international defence markets, including potential manufacturing and technology partnerships.

Particular interest emerged from organisations in the United States, Canada, the Middle East and Europe, with a number of priority discussions progressing towards further technical and commercial evaluation.

In the United States, Innovaero is exploring opportunities under the Department of Defense's Foreign Comparative Testing (FCT) program, which provides a potential pathway for evaluating mature, allied technologies against US defence requirements.

Innovaero CEO Greg Tunny said the engagement reinforced the international relevance of the Company's technology and manufacturing strategy.

"AUSA provided valuable access to organisations seeking affordable, adaptable autonomous strike and C-UAS Interceptor capabilities. Our priority is to convert this interest into practical partnerships that support market entry, customer evaluation and ultimately production."

The engagement follows Innovaero's successful A$40 million IPO and September ASX listing, providing capital to advance its OWL product family and expand Australian sovereign manufacturing capacity.

The Company will continue evaluating priority opportunities, with all prospective partnerships and contracts subject to further assessment and applicable approvals.
